

Jaydeep Rath

SRE - DevOps Lead | GCP | Kubernetes | Production Reliability | Terraform | Automations

+91-9776260277 | pinkujaydeep@gmail.com | Pune, India | www.linkedin.com/in/rathjaydeep

Core Competencies

- ★ SRE / Reliability Engineering
- ★ Incident Management
- ★ Problem Management
- ★ RCA & Postmortems
- ★ SLO / SLI / Error Budgets
- ★ Production Operations
- ★ Kubernetes / GKE
- ★ CI/CD & Release Engineering
- ★ Observability
- ★ Automation
- ★ Technical Leadership
- ★ On-Call Operations

SRE & RELIABILITY ENGINEERING

Site Reliability Engineering | Production Reliability | SLI / SLO | Error Budgets | SLA Management | Incident Management | Problem Management | RCA | Postmortems | MTTR Reduction | On-Call Operations | Operational Readiness | Automation | Toil Reduction

CLOUD & INFRASTRUCTURE

GCP | GKE | Kubernetes | Docker | Terraform | Cloud Infrastructure | Microservices | Production Operations

KUBERNETES & PRODUCTION OPERATIONS

Kubernetes Troubleshooting | CrashLoopBackOff | Readiness/Liveness Probes | Deployments | Rollouts | Services | Resource Utilization | Networking & Connectivity | Production Recovery | Rollback

CI/CD & RELEASE ENGINEERING

Harness CD | Google Cloud Build | Google Cloud Deploy | Git | CI/CD | Release Management | Production Deployments | Deployment Troubleshooting | Rollback & Recovery

OBSERVABILITY & OPERATIONS

Splunk | GCP Cloud Logging | LogicMonitor | ThousandEyes | Dashboards | Alerting | Batch Monitoring | Failure Detection | Production Health Monitoring

AUTOMATION & SCRIPTING

Shell Scripting | SQL | PL/SQL | Python | Auto-Recovery | Operational Automation

Professional Summary

SRE / DevOps professional with 14+ years of experience in production reliability, cloud operations, Kubernetes, CI/CD, observability, automation and incident management across FinTech, Telecom and Healthcare environments. Experienced in operating customer-facing payment and merchant-boarding platforms on GCP/GKE with 21+ microservices and 24/5 production coverage. Strong background in high-severity incident response, RCA/postmortems, production troubleshooting, deployment reliability, operational automation and technical mentoring. Delivered measurable improvements including 40% reduction in repeat incidents, 25% reduction in MTTR, 50% improvement in operational readiness and less than 1% SLA breach rate.

Professional Experience

Associate Site Reliability Specialist — INFONOX (A Global Payments Company)

Pune, India | Aug 2021 – Present

- **SRE / PRODUCTION RELIABILITY**
 - Govern 24/5 production reliability for GCP/GKE payment and merchant-boarding platforms supporting 21+ microservices, maintaining a less than 1% SLA breach rate.
 - Lead production incident response, high-priority escalations, root-cause analysis and postmortem activities for customer-facing payment services.
 - Troubleshoot Kubernetes workloads across application and infrastructure failure scenarios including CrashLoopBackOff, probe failures, deployment rollouts, resource constraints, service connectivity, networking and production recovery.
 - Coordinate cross-functional troubleshooting across application, cloud infrastructure and operations teams during critical production incidents.
 - Apply SRE-oriented operational practices around service reliability, incident trends, SLA monitoring, recovery and continuous improvement.
- **INCIDENT / PROBLEM MANAGEMENT**
 - Lead critical incident investigations from initial triage through recovery, RCA and post-incident corrective actions.
 - Identify recurring production failure patterns and implement automated recovery mechanisms to reduce repeat incidents and manual operational effort.
 - Support on-call readiness and production troubleshooting practices for engineering and operations teams.
- **CI/CD & RELEASE ENGINEERING**
 - Manage production deployments using Harness CD, Google Cloud Build and Google Cloud Deploy, including deployment failure investigation, recovery and rollback.
 - Support controlled application releases across multiple environments and microservices while maintaining production stability.
 - Contribute to migration and adoption of Harness CD for production deployment workflows.
 - Troubleshoot CI/CD and deployment failures across build, deployment and runtime stages.
- **AUTOMATION & TOIL REDUCTION**
 - Designed SQL/PLSQL and Shell-based automated recovery workflows for recurring production issues, reducing repeat incidents by 40%.

LEADERSHIP & SERVICE OPERATIONS

Technical Leadership | Production Escalations | Client Escalations | RCA Leadership | Mentoring | On-Call Readiness | SOPs | ServiceNow | BMC Remedy | Jira | Confluence | ITIL | Agile

SRE ACHIEVEMENTS

- 40% reduction in repeat production incidents through automated SQL/PLSQL and Shell recovery workflows.
- 25% reduction in MTTR through improved Splunk and LogicMonitor monitoring and operational dashboards.
- 50% improvement in operational readiness through automation, monitoring and operational process improvements.
- Less than 1% SLA breach rate across 21+ GCP/GKE microservices supporting payment and merchant-boarding systems.
- 30% reduction in ticket turnaround time through optimized incident triage.
- Mentored 12 engineers across production troubleshooting, incident management and on-call readiness.

Projects & Tools Built

- ★ Automation Dashboard
- ★ Batch Monitoring & Failure Detection
- ★ Operational Automation & Auto-Recovery

Education

- B.Tech – Electronics & Communication Engineering (Nalanda Institute of Technology, BPUT – 2011)

Awards

- ★ Employee of Month
- ★ Best Performer - 2025
- ★ Continuous Commitment Award - 2026

- Developed operational automation and batch failure detection capabilities to reduce manual intervention and improve production support efficiency.
- Improved operational readiness by 50% through automation, monitoring and operational process improvements.
- **OBSERVABILITY**
 - Built and enhanced Splunk and LogicMonitor dashboards for service health, operational trends, ticket health and batch failure monitoring.
 - Used application and infrastructure logs and monitoring data to accelerate production troubleshooting and reduce MTTR by 25%.
- **TECHNICAL LEADERSHIP**
 - Lead production escalations and RCA/postmortem discussions involving multiple technical teams and stakeholders.
 - Mentor 12 engineers on production troubleshooting, incident response, on-call readiness and operational practices.
 - Drive knowledge sharing, troubleshooting standards and operational improvements across the production support team.

Senior Operations Engineer — Netcomm IT Solutions (Vodafone)

Bhubaneswar, India | Jun 2016 – Aug 2021

- Managed 24/7 production operations and reliability for Vodafone telecom systems serving approximately 1 million subscribers.
- Led critical production incident troubleshooting, escalation management and RCA activities for customer-facing telecom services.
- Improved incident triage and operational processes, reducing ticket turnaround time by 30%.
- Developed Shell and SQL automation to eliminate manual batch validation activities and improve operational efficiency.
- Created and centralized operational SOPs in Confluence to improve knowledge transfer and accelerate engineer onboarding.
- Designed multi-shift on-call playbooks supporting production operations and incident response.
- Coordinated troubleshooting across application, infrastructure and operations teams during critical service issues.

System Integration Engineer — TCS

Kolkata, India | Nov 2014 – Jun 2016

- Executed backend system integrations and enterprise production releases.
- Supported 10+ backend system integrations and coordinated release activities for zero-downtime cutovers.
- Performed production troubleshooting and supported deployment and integration activities across enterprise applications.

Earlier Experience

- **.NET Support Engineer | Tatwa Technologies | 2013 – 2014 —**
Supported and enhanced .NET healthcare and finance applications, troubleshooting production issues and assisting with application maintenance and deployments.
- **Jr Software Developer | Designs Ultima | 2012–2013—**
Developed ASP.NET modules, performed application testing, and supported deployment activities across development and test environments
